Valve Adjustable Technology

Controllable nebulisation rate at consistent particle size

The proprietary adjustable valve is able to deliver medications of different viscosity level according to every user's conditions without exchanging parts.

The Valve Adjustable Technology (VAT) bottle allows users to adjust different levels of Nebulisation rate 0.08 (closed) / 0.5 (fully opened) ml/min at consistent particle size. Higher nebulisation rate (fully opened) is for higher viscosity medications and higher breathing capacity user while lower nebulisation rate with closed valve will be more appropriate for kids/infants with lower breathing capacity.

VAT is recommended for some respiratory disorders as well as for intensive use in general.
